

FUEL - purveyors of bass for sound systems; original instigators of a whole street movement of low frequency driven dance culture, have laboured, sweated and given birth to some bass babies that bite. Fuel's new subwoofer line up does exactly that, simply they are subs designed and made to meet the outrageous demands of Fuel music and lifestyle

FUEL.....DESTROY THE STREET!

SHOCKWAVE
 THE LOUDEST BASS ON EARTH

www.in-car-stuff.com

**MILITARY SPEC 10" 12" 15" SUBS
 SURFACE TO AIR TECHNOLOGY**

15" SUB

STA15
 Speaker size 15"
 RMS power 600w
 Peak power 1000
 Sensitivity 99dB
 Impedance single 3 Ohm
 Mounting depth 200mm
 Mounting diameter 350mm

12" SUB

STA12
 Speaker size 12"
 RMS power 400w
 Peak power 800
 Sensitivity 90dB
 Impedance single 3 Ohm
 Mounting depth 170mm
 Mounting diameter 280mm

10" SUB

STA10
 Speaker size 10"
 RMS power 250w
 Peak power 600
 Sensitivity 91dB
 Impedance single 3 Ohm
 Mounting depth 150mm
 Mounting diameter 230mm

Fuel Shockwave Subs > as featured on the Ministry of Sound Maximum Bass TV ad and the ministry modified RX7.

It was no mean feat to produce a sub that was capable of serving up what we class as REAL BASS, if you've heard our music, you'll know exactly what we mean. Here's how we did it -

Half kilowatt of real power handling, single voice coil with space age material 'conex' spider for long lasting speaker wire, inlaid woven tinsel leads, parabolic dual layer new high top roll surround suspension, a 3 ohm voice coil that will help your amp serve up the power needed for our tunes, and the all important super rigid super light paper cone, there is no substitute for paper, do not be fooled, paper is king. All this is teck talk for a subwoofer that can drop, throb, swell fatness and plain boom like it means it without bursting into flames before dawn. Trust us, they have been designed and tested to death and beyond and survived and let us tell you there aint many subs out there that can survive a Fuel test!

Ask your local car audio supplier for more information.

FSE12

Height 345mm
 length 410mm
 Depth top 430mm
 Depth bottom 500mm
 driver sta2
 RMS power 400 watts
 Peak power 800 watts

The Fuel FSE12 harnesses a single Fuel 12" sub - its heavy weighted construction adds to the solidity required for extreme bass. Main features include wedge design measured to match the fuel driver parameters, chrome protection bars on the sloped baffle board allows forward or rear facing positioning in the boot whilst maintaining protection for the sub. A large 4" flared super extended port tunes the box to hit all the lows required from Fuel music, whilst the compact design keeps the bass tight and sharp.

FDE12

Height 340mm
 length 820mm
 Depth top 430mm
 Depth bottom 480mm
 driver sta2 x2
 RMS power 800watts
 Peak power 1600 watts

If your looking for a serious bass solution then the FDE12. You finally found it - this is a large enclosure, but it is essential to allow these super drivers the airspace they really need to deliver up extreme bass. The clever design is based on an SPL letterbox format - extended baffles and labyrinth design gives overwhelming performance, very very deep bass is pumped out of the power port - this box was designed specifically for our heaviest bass tracks, but beware, this enclosure will hurt you, so careful on the throttle!
